

Part A

<u>Department</u>	: CSE
<u>Program</u>	: B.Sc in CSE
<u>Course No.</u>	: CSE-3223
<u>Course Title</u>	: Information System Design and Software Engineering
<u>Examination</u>	: Semester Final
<u>Semester (Session)</u>	: Fall - 2020
<u>Student No.</u>	: 18.01.04.129
<u>Signature and Date:</u>	

Md. Anwarul Habib
01/11/2021

Ans. to the Ques. No. 2

(a) This structure used in the given interview is Diamond Structure.

Diamond Structure is the combination of funnel structure and pyramid structure. This structure is basically started with ~~a~~ a specific easy question. ~~Since~~ It has a specific answer. Then by gradually moving, the questions ~~are~~ given asked ~~are~~ like opinions or other general question with no specific/ right answer, finally, ends with yes/no, agree/disagree or any type of specific ~~question~~.

In the given interview, first question is, "~~then~~ 'What kind of document do I require to open a bank account?'

It is a specific question having a specific answer.

Then, 'How can I add a nominee to my account?' and ~~some~~ ^{next} ~~no~~ few questions have no specific answer.

So, this is general question with no right answer.

Then finally this interview end-up with a some specific question like 'Can I send money overseas through your bank?' ~~and it~~ ~~and~~ have some specific answer.

§ Now, rearranging the interview and making this a § Pyramid Structured:

(i) What kind of documents do I require to open a bank account?

(ii) Can I send money overseas through your bank account?

(iii) How long will it take to get my cheque book?

(iv) What loan I am eligible for?

(v) How can I apply for a loan?

(vi) How can I operate my account?

(vii) How do I repay the loan?

(viii) Could you please explain your banking system?

Here, in my modified interview that starts with a specific warm up question with specific answer.

Then the next 3 questions are also specific. Then, next questions are general questions which have no specific answer.

So, it is a Pyramid Structured Question set.

(b) Smoke Testing :

Smoke Test refers to an initial testing which is performed on newly developed software build. ~~By~~ By this kind of software testing, it is cleared that the core functionalities of software product is working perfectly without any issues.

Example - Bm Ticket Reservation Site, In this smoke Test examples are, the tester will ensure that site signing function, Changing password, Booking/Cancel Seats etc are working fine.

Regression :

Regression testing refers to an in depth and thorough examination of software to ensure that recent code change has not adversely affected ~~by~~ the existing feature.

Example - More complicated ~~to~~ use case testing in Airline Ticket Management & System.

Am. to the Ques. No. 3
