Use Case Diagram

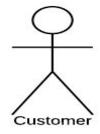

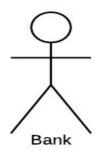

1. **System** - website, s/w component, Business process, Application etc.

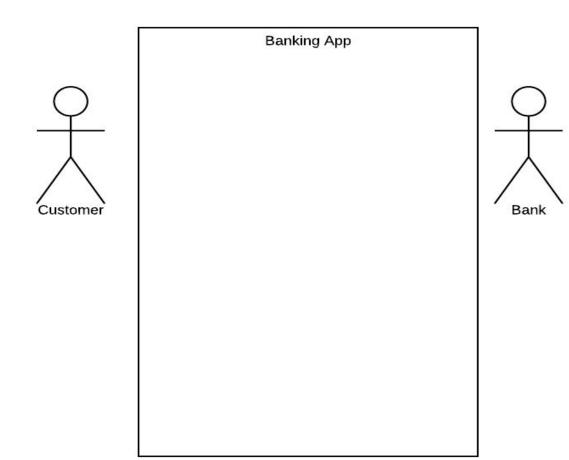

- 2. Actor Person, organization, another system, an extended system.
- a) **Primary Actor** Initiate the use of the system
 - Left of the system
- b) **Secondary Actor** Reactionary

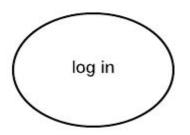

- Right of the system

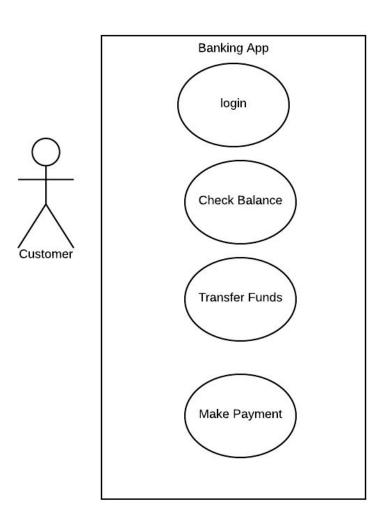

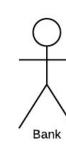

3. *Use Case* - an action that accomplishes some sort of task.

Example: Use Case Diagram for Banking App

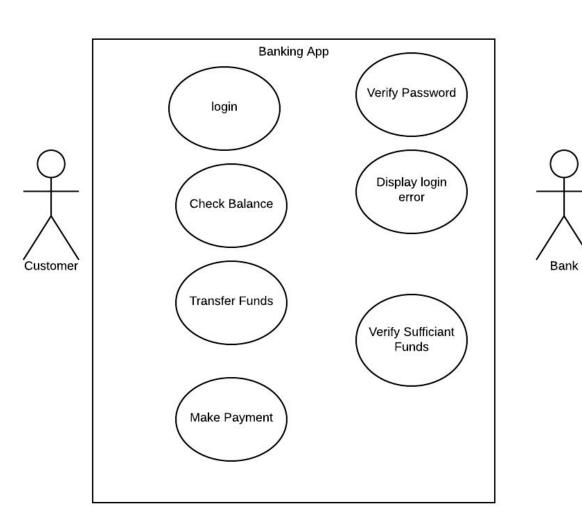

- Allow Customer to log in
- Check the Account Balance
- Transfer Fund between Accounts
- Make Payments towards bills

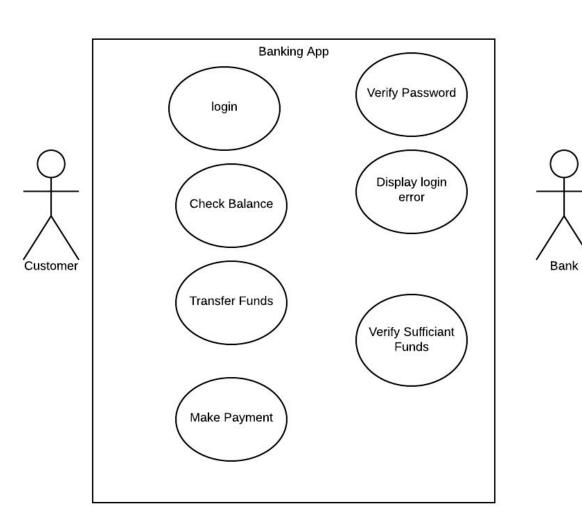

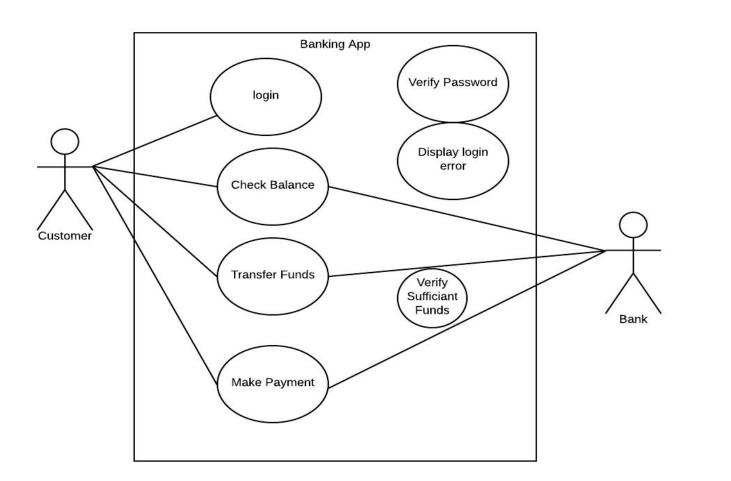

4. Relationships -

- A. Association
- B. Include
- C. Exclude
- D. Generalizations or inheritance

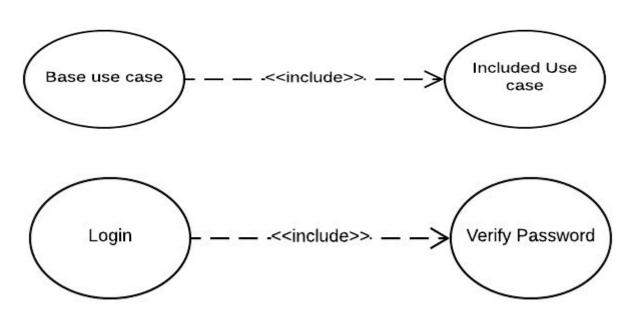

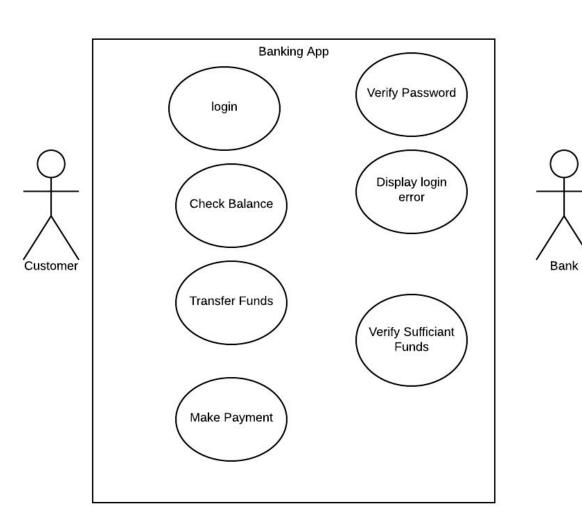

a) Association - basic communications or interactions

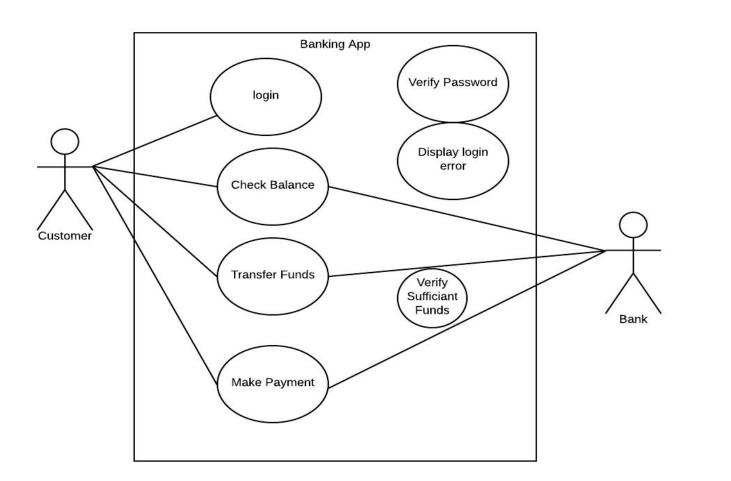

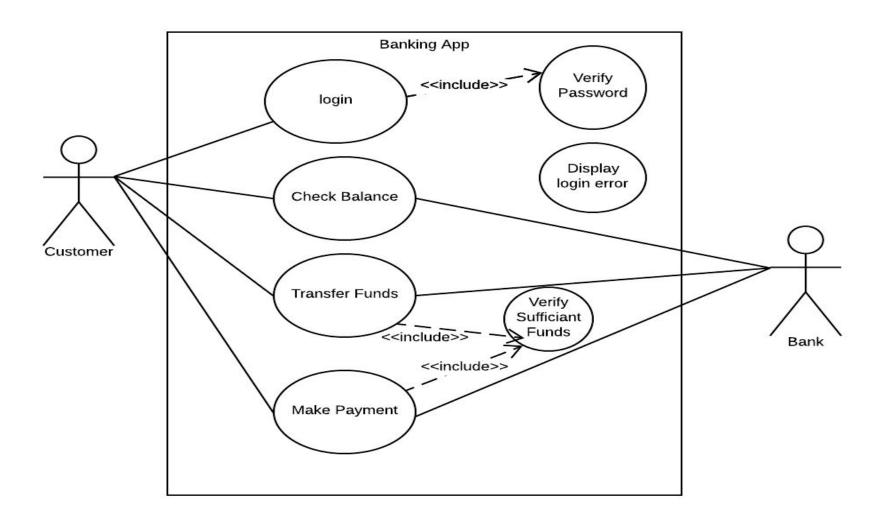

b) Include

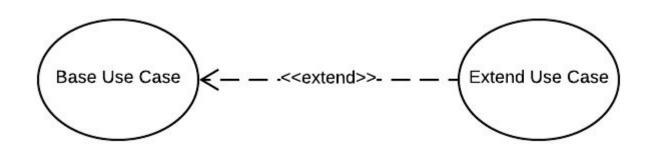

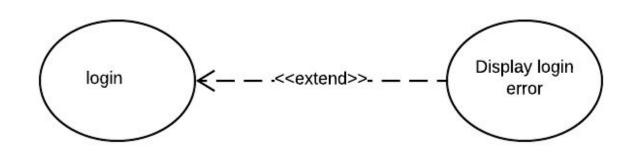

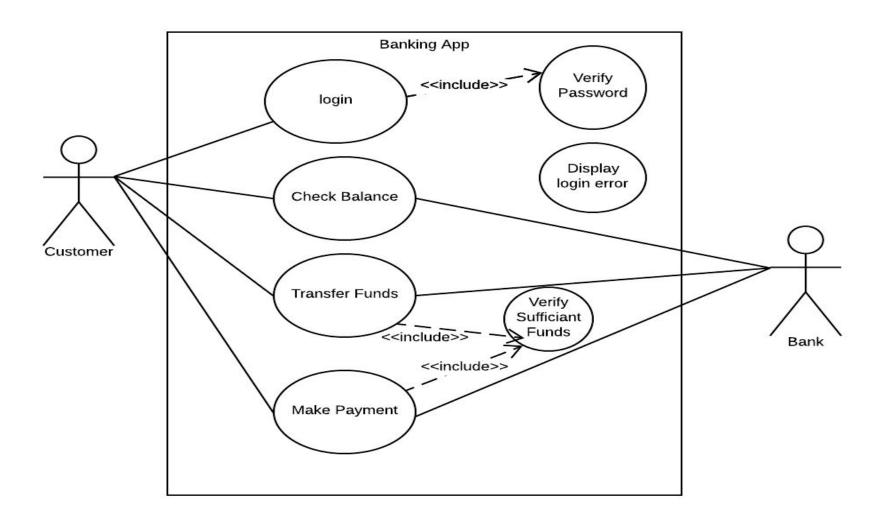

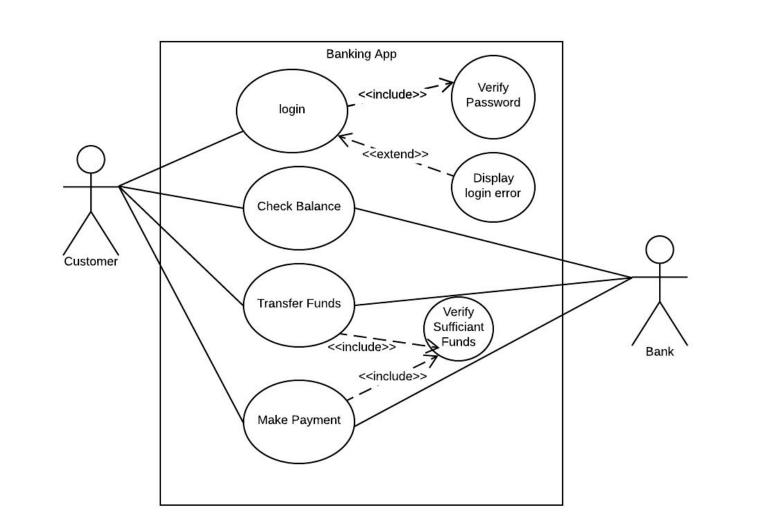

c) Extend

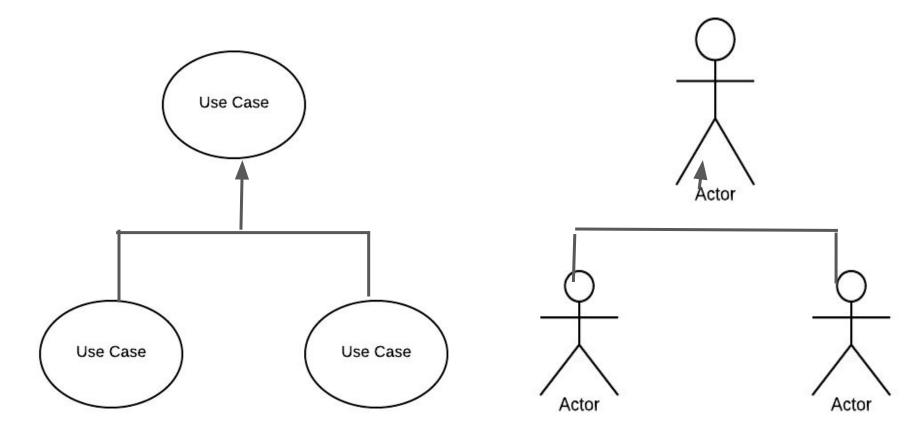

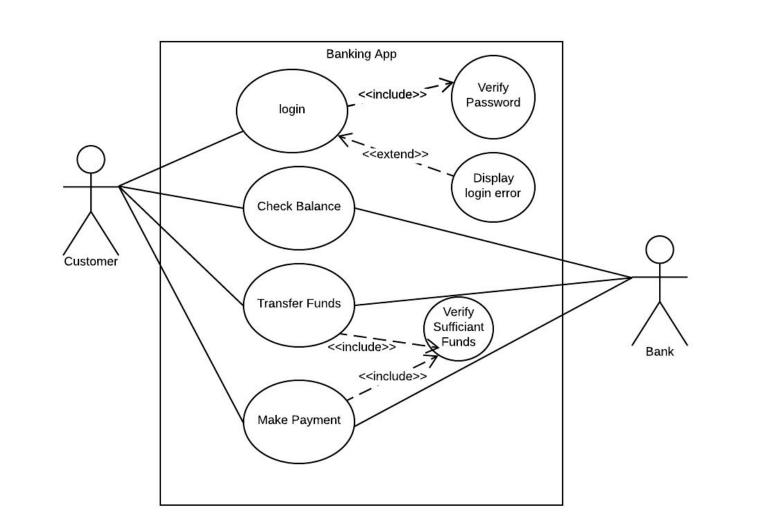

Example:

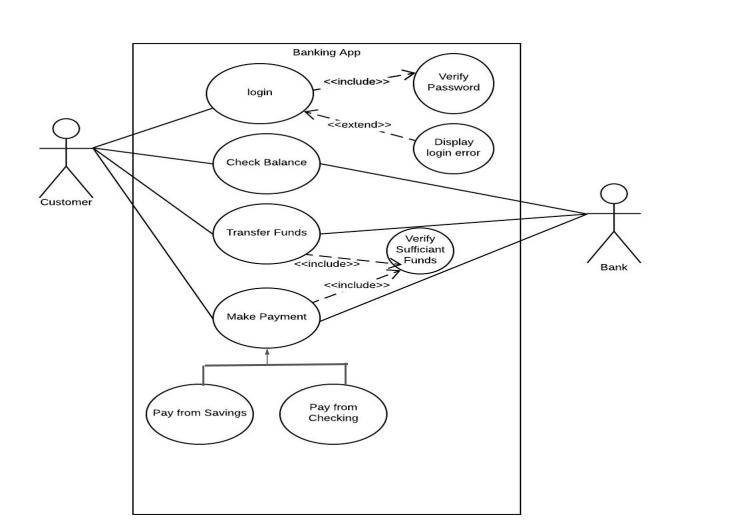

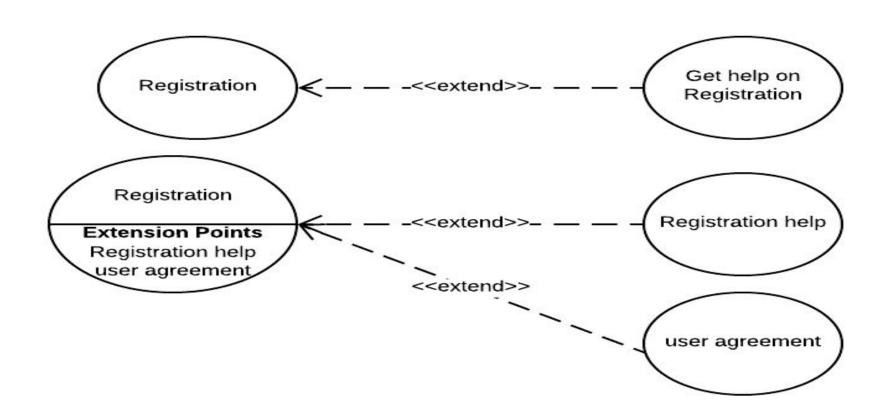

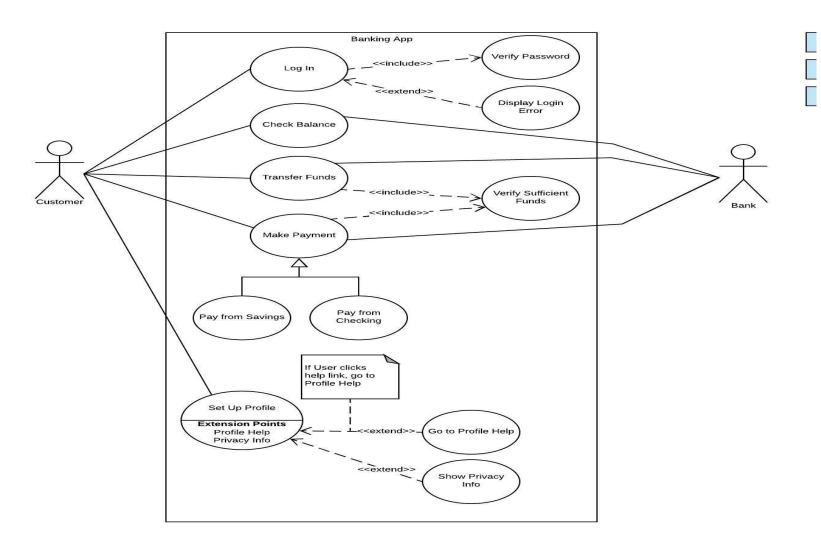

Use Case Diagram - Extension points

UML- case study

Railway Reservation System is a system used for booking tickets over internet. Any Customer can book tickets for different trains. Customer can book a ticket only if the tickets are available. If the tickets are available customer books the tickets upon make the payment and by initially filling details in a form.

For cancellation of ticket the customer has to go at reservation office with the fill-up during the ticket booking and ask the clerk to cancel the ticket than the refund is transferred to customer account.
